PROFESSIONAL EXPERIENCE

Junior Developer

Sujyot Technologies Pvt. Ltd. — Nashik, Maharashtra

Dec 2025 – Present

- Develop, maintain, troubleshoot, and provide application support for ERP, healthcare, diagnostic, optical, and educational management software.
- Work on **EduFlame**, a School/College ERP and Student Management System, supporting day-to-day application operations and modules.
- Work with modules including **Student Admission, Fee Management, Attendance, Reports, User Management**, and other administrative functionalities.
- Provide application support and troubleshooting for **DiagnoFlame**, a diagnostic and healthcare management application.

- Contribute to **VisionFlame**, an Optical and Eye Hospital Management System, including application maintenance, database operations, reporting, and issue resolution.
- Work with **VB.NET, ASP.NET, Windows Forms, and SQL Server** for application maintenance and development activities.
- Write and troubleshoot **SQL queries, stored procedures, views, and database-related issues**.
- Analyze reported application issues, identify possible causes, and assist in implementing appropriate solutions.
- Work with **Crystal Reports and RDLC Reports** for application reporting requirements.
- Support REST API and third-party service integration used within applications.
- Troubleshoot production issues and assist with application performance and functionality improvements.
- Provide technical support and maintenance across other company projects as required.
- Assist junior team members with application understanding, technical issues, and day-to-day development/support activities.
- Collaborate with team members during requirements understanding, development, testing, deployment, and maintenance activities.

PROJECTS

Digital Complaint Management System

React.js | Node.js | Express.js | MongoDB | Bootstrap

- Developed a web-based complaint management system for students and administrators.
- Implemented student registration, authentication, complaint submission, complaint history, and status tracking.
- Implemented role-based functionality for managing complaints.
- Developed REST APIs for communication between frontend and backend.
- Used MongoDB for storing and managing application data.
- Designed responsive interfaces using React.js and Bootstrap.

UniAttend

Android Studio

- Developed an attendance management application.
- Implemented attendance-related functionality and automated attendance reporting.
- Designed a user-friendly mobile application interface.
